Science jobs from Genomics and Biomarkers Program, Cancer Center, Hackensack University Medical Center: job description

The Genomics and Biomarkers Program at the John Theurer Cancer Center of Hackensack University Medical Center (HUMC) has two postdoctoral positions open for lymphoma and cancer research. The positions are for biomarker discoveries that will lead to personalized and targeted cancer therapies. The Cancer Center and HUMC ranks with top hospitals in US for the patient volume and quality patient care. HUMC has named the top regional medical center in the state of New Jersey for many years. The fellows are expected to interact with clinicians at the medical center. Applications will be reviewed immediately to fill positions.

Requirements are listed below.

1. **Must be Permanent Resident or Citizen of USA**
2. Communicate effectively and fluently in English
3. Show history of scientific publications in major peer reviewed journals
4. Previous research activities in lymphoma preferred but not required
5. Familiar with cancer biology and signaling pathways
6. Capable to physically handle animal models in future; will train if necessary

Please submit CV and reference letters to Dr. K. Stephen Suh:
